SUMMARY

Senior Software Developer with over five years of experience in **software product development, application maintenance, and project management**. Competent in creating enterprise **SaaS** solutions and managing dynamic network projects for international brands using **agile** methodology and industry standard procedures. Strong background in **coding, debugging, migration, development, implementation, defect correction, and incident analysis**. Demonstrated ability to collaborate across cross-functional teams to deliver **scalable, secure and high-performance** applications. Passionate about continuous learning and the use of emerging technologies to drive business innovation and technical excellence.

TECHNICAL SKILLS

Programming languages: Java 17, Core Java

Framework: Spring Boot, Hibernate, JPA, Microservices

Database: Postgres, Oracle, Redis

Developer Tools: IntelliJ, Eclipse, VSCode, Sublime, Postman, PgAdmin, Swagger

Build Tools: Maven

CICD Tools: Docker, Jenkins, Kubernetes, AWS

Cloud: AWS

Process: Agile, Scrum, Sprint, Jira, SDLC

Other Tech Skills: Data Structure, Software Design, System Design, Data Analysis, SonarQube, Junit, Datadog, NewRelic, Kafka, Rabbit MQ, SQS, S3, Unix

Interpersonal: Leadership, Teamwork, Problem Solving, Critical-Thinking, Communication Skills

WORK EXPERIENCE

Senior Engineer – Cloud & Software, LTIMindtree

Feb 2023 – Present

Product: Sabre, Amex GBT

- Delivered excellent code on schedule after closely collaborating with stakeholders to define the functional and technical requirements. For my commitment and contributions to the project's success, I received Super Crew and Team Player badges.
- To improve agility and performance, Collaborated with architects to understand mainframe operations and strategically split functionalities into microservices for better agility and performance. I organised detailed Low Level Design (LLD) sessions to optimise application responsiveness and operational efficiency by 60%.
- I used monitoring and performance analysis tools such as New Relic to continuously improve application performance and resource utilisation. I facilitated seamless communication and data exchange between microservices using messaging protocols such as RabbitMQ and SQS.

Software Engineer, LocoNav

Feb 2022 – Feb 2023

Product: LocoNav SaaS, Marketplace, OMS

- Deployed effective code using REST API and Spring Boot to develop web applications within the first week of joining. Worked on a product over-layer API management tool for effective use and reuse to maximise the value and benefits for third-party clients, which reduces the BAU time by 40%.
- Built synchronous communication between microservices, implemented an appropriate logger mechanism to track an order across the various services, and developed appropriate error and exception handling.
- Contributing ideas to help ensure that required standards processes are in place and actively looking for opportunities to improve process efficiency.
- Collaborating with other developers to identify and alleviate several bugs and errors in the application, designing and developing reports accordingly.

Software Developer, Amdocs

Oct 2019 – Feb 2022

Product: EPC, Nexus, Excalibur

- Designed complex SQL code, validated, and copied the databases weekly to be up to date. Managing several servers using

Unix commands and running the reports to validate the data of 7 different databases

- Optimised BAU hours by 40%. Developed automation through an SRE mindset and tools to encounter more than 70,000 targeted users daily to avail the best offers for their phone number's price plans.
- Created a test case generation tool that creates random XML docs from XML Schema
- Distinguished the barrier that exists between the cross-functional team. Keeping them in a network, coordinating and collaborating with the teams.

KEY PROJECTS

Advance Mid Office System – GBT, Egencia

Tools Used: Java, Spring Boot, Microservices, Postgres, Rabbit MQ, JSON, Git, AWS, System Design

- Redesigned the Amex GBT legacy codebase using Docker and Spring Boot to a microservice architecture. Implemented multiple services and built communication through a queue to support BAU.

Form Of Payment – Sabre

Tools Used: Java, Spring Boot, Rest, Microservices, JSON, XML, GCP

- Developed a microservice-based validator from legacy code that has the ability to validate modes of payment for specific PNR via multiple credit card vendors, debit cards and cash for travel agents.

Geography Service

Tools Used: Java, Rest, Microservices, Redis, Hibernate, Prometheus, Grafana

- Ensured the product's global region, time zone, local currency, and global currency to facilitate payments through their order cart screen and guaranteed region-based pricing and applied taxes.

Marketplace

Tools Used: Java, Rest, Microservices, Redis, Hibernate, Prometheus, Grafana

- Deployed efficient code using Spring Boot and REST API to create web applications in the first week of employment, resulting in a 30% increase in service utilisation and a speedy customer onboarding process.

Enterprise Product Catalogue, Nexus & Excalibur Config

Tools Used: Core Java, Unix, Oracle SQL

- Over 17 million prepaid and postpaid customers worldwide were impacted. To get the best deal, set up customers' accounts, price plans, and SOC.

AWARDS AND ACHIEVEMENTS

- Publishes journal paper on **Automated Attendance System by Using Face Recognition**, International Journal of Engineering and Applied Sciences (IJEAS) ISSN: 2394-3661, Volume-5, Issue-7, July 2018
- Received the award for top 2% ranking in the Internet of Things course offered by **IIT Kharagpur** via NPTEL
- Optimised BAU hours by 40%. Developed automation through the **SRE** mindset and tools encounters more than 70,000 targeted users daily to avail the best offers for their price plans.
- Improved **Google AI/ML** products for people by contributing to the **Google Crowdsourcing** platform. Organised community meet-ups and received the top contributor award (60,000+) in India from **Google**.

EDUCATION

JIS College Of Engineering, B. Tech in Computer Science and Engineering

Jun 2015 – Jul 2019

- **DGPA:** 8.9/10
- **Coursework:** Computer Architecture, Comparison of Learning Algorithms, Computational Theory, Soft Computing
